Hi Stephen!

Thanks for testing this.

Delighted to hear Multi-geo worked so well here - **'works perfectly'** is what we are aiming for.

To your other email regarding color filters, that's a known ML issue, unfortunately ambient light conditions play a big impact on the color prediction particularly in the white/grey/silver/black continuum. Your hunch to lower the confidence thresholds is exactly right, hopefully that will help there.

Visual search is currently receiving a huge overhaul so exciting news on the horizon there. When we have a beta of this, would you like to be an early tester?

On convoy - agreed it needs work. What are the changes you would most like to see? If you had to list top 3 changes/features in convoy to make it great- what would they be?

Martin

Stephen,

It was great to chat today, thanks for walking us through that.

We will keep in touch re Multi-geo and possibilities therein!

Martin

Subject: RE: Multi Geo Search not working...original message string titled RE: Meta Data Download fail

Flock Safety Support,

I tested the MultiGeo search again.

In summary…still a failure.

On the "Plus" side, I was able to enter more than 2 locations!

I created the data by driving around and wrote down where I was and what time I was there. I had four different time periods from four geographic locations consisting of 7 cameras.

I ran the Multi Geo search on 4 location/times with 7 cams=zero results.

I ran the Multi Geo search on location 1 and 3 consisting of 2 location/times with 3 cams=zero results

I think if I were dealing with real world data I would have to run multiple search combinations, probably by single cameras vs geographic areas and might still never get a result. Certainly not a definitive result of the vehicle being in all locations.

So, I conducted a "search" just for my plate and looked and confirmed that my vehicle was seen at each location at the specified times (I DID find Cam 010 failed to read my plate due to glare).

I ran the Multi Geo Search again using the known, confirmed, verified information from 4 locations/times with 6 cameras= Zero results

I eliminated questionable results and ran the Multi Geo search again using the known, confirmed, verified information from 4 locations/times with 5 cameras=Zero results

My partner and I have some suggestions you may consider implementing:

1. Present the results by groupings instead of cameras. For instance, I had 4 geographic locations/time consisting of 7 cameras. In my first search test, the one camera from group one didn't read the plate, but if Flock returned searches by groupings, as long as the plate appeared in one of the four geographic locations, Flock would say the vehicle was seen in these 4 areas vs relying on each and every camera in an area capturing the plate.
2. Present the results by a percentage (maybe not the right term). For instance, In my first search the results would come back saying a common plate did not appear on all 7 cameras but DID appear on 6 of the 7 cameras (or 4 of the 7 camera etc.)

Attached is a zip file containing screen captures and my data used. The data will probably expire 3/22. Feel free to use it and test out the Multi Geo search.

I think the tool could be very useful but I still think it fails too often.

Hi there Corporal Best,

The engineering team has reached out and advised that a fix has been implemented! Can you test it from your end to ensure that you are getting the results you expect?

Let me know if there are still any issues moving forward.

Stay safe,
Chris

Hi there,

Just wanted to provide you with a quick update on how the multi-geo search ticket is progressing. The engineers were able to meet this week and identified the source of the issue and are working on implementing a resolution. I should be emailing back shortly once the solution has been implemented.

Thank you for your patience.

Stay safe,
Chris

Hi there,

Thank you for your patience. Our engineering team is doing a deeper dive into the back logs for multi-geo search. They will be having a meeting about this soon and will be able to provide a more detailed update.

I am still waiting to get further information about the Zipfile and once I do, I will let you know.

Again, thank you for your patience while we work towards resolutions.

Stay safe,
Chris

Flock support,

Things still don't appear to be working properly.

I'm using Chrome v120.0.6099.110.

I was already signed into Flock when I got your email.

When I went to the Search->Advanced Search screen, I got the spinning wheel of waiting and was never able to do anything.

I signed out, closed out and re-started Flock.

This time I went to the Search->Advanced search screen. I was able to input two of my test locations, but now when I click on the "add another location" button, nothing happens. (see below)

I'll try closing out, clearing cache, trying again…but so far…not impressed.

Thank you for letting me know. Currently, Corporal Best, you are the only person who has had issues with the multi-geo search not functioning as expected, correct?

Thank you for your patience and understanding with the CSV download experience. This component of the Axon integration is new and still being developed. As programs and software are developed bugs happen along the way and we are working closely with Axon to smooth out the wrinkles.

Stay safe,
Chris

My crime analyst has frequently reported problems with flock searches (not specifically multi-geo search).

And the issue with the meta data (and image) download is separate and not exclusive to multi-geo.

Both crime analysis and I have had the meta data and image downloads being only a fraction of the reported search result objects.

Hi there,

The engineering team has reached out and would like to know if you are the only user who is having an issue with the multi-geo search or if there are multiple users who are having the same experience.

Some additional information as well regarding the CSV download. Our product team is currently working with Axon and the Fleet 3 integration process. They are working closely with them to ensure their product code aligns with our product code for a more seamless process. The integration is a newly developed software and with newly developed software there comes a new understanding on how to best work together to ensure that you are able to to effortlessly and efficiently use the software. The importance of a resolution has been shared and escalated accordingly and when I have an update, I will make sure to share it with you.

Stay safe,
Chris

Good morning,

Thank you for sending the attachments. I have shared this information with our engineering team. The Multi-Geo search experience and the CSV not matching the Objects are both with our engineering team and once I hear an update from either, I will let you know.

Thank you for your patience.

Stay safe,
Chris

Chris Howell (Flock Safety Support),

Here's screen capture showing the results and the two spreadsheets.

Good morning,

Corporal Best, when you have a moment, can you please send me the CSV files that you downloaded that are not displaying all of the results for the search, please?

Thank you for your assistance with this.

Stay safe,
Chris

Flock Safety Support,

After having a meeting with Flock's Chris Howell, and sharing my computer screen, we confirmed there was a problem with the MultiGeo search.

We also figured out that when I conduct a "search" and get the 1080 objects, I need to use the slider on the side of the screen and scroll down all the way to the bottom of the list in order for all of the objects to load before I click on the "Download Metadata as CSV". However even doing this did not download all of the hits.

Of the 1080 hits, the spreadsheet had 360 entries

Of the 230 hits, the spreadsheet had 120 entries

The "Download images as a zip" was even worse.

With only 42 images of the 1080 hits and only 50 images of the 102 hits

I am unable to continue this investigation using Flock to search for the vehicle or using the incomplete data from flock to try and identify the vehicle.

Corporal Stephen L. Best

Subject: RE: Meta Data Download fail

I take back what I said. Neither of the metadata downloads worked correctly.

One had 1080 objects the other had 230 objects. The meta downloads that said they completed each only had 41 entries.

So neither is of any use to me.

I'm still trying

I left you a voicemail Corporal Best, I am about to head into a meeting but will be free in about 30 min. Can you give me a call at 866-901-1781?

Stay safe,
Chris
